

BrightPath Tech

Response to RFP - Supplier Management & Analytics Platform

Procurement request: a secure, scalable supplier-management platform integrating procurement, ERP, identity and reporting systems, with phased delivery, transparent pricing and ongoing support.

Executive Summary

BrightPath offers the lowest price and fastest schedule, but the proposal gives limited compliance evidence and has the weakest comparable-enterprise experience.

Understanding of Requirement

The buyer needs improved supplier onboarding, workflow control, integration, auditability, reporting and operational support while balancing technical fit, implementation risk, security and total cost.

Proposed Solution and Technical Approach

- Python/TypeScript services on a managed cloud application platform.
- REST API integration is proposed, but detailed interface contracts are deferred to implementation.
- Autoscaling is stated but no capacity model or explicit performance thresholds are provided.
- Only a high-level architecture diagram is supplied.

Implementation Plan, Team and Commercials

Timeline and Milestones

Phase	Weeks	Milestone
Kick-off/design	1	Approved backlog
Build	2-6	Core portal and workflows
Integrations	7-8	ERP and SSO connections
UAT/launch	9-10	Production go-live

Team Structure

A cross-functional delivery team is proposed with project management, engineering, QA and cloud/integration responsibilities appropriate to the stated plan.

Price Table

Item	USD
Implementation	\$245,000
Integration/migration	\$35,000
Year-1 support	\$45,000
Year-1 total	\$325,000

Commercial Assumptions

Prices are fictional classroom figures. Scope changes and additional interfaces beyond the stated assumptions require written impact assessment and buyer approval.

Risk Management

The project team will maintain a risk register, review high-impact items weekly, and escalate scope, dependency, security, data and schedule risks through project governance.

Security, Compliance, Support and Experience

Security, Compliance and Risk Controls

- Encryption, role-based access, HTTPS and daily backups are stated.
- No certification details, audit-report evidence or penetration-test cadence are supplied.
- Incident handling is described as best-effort escalation without severity-specific response targets.

Support Model and Relevant Experience

Business-hours support is included with an optional 24x7 add-on. Two prior portal projects are mentioned; only one involved ERP integration.

References

- Cobalt Retail Services - vendor registration portal (fictional).
- Second project name withheld; no reference contact supplied.

Known Risks / Qualifications

- Compliance evidence is incomplete.
- Aggressive 10-week schedule has little contingency.
- No named security specialist.

Declaration: this proposal is artificial test data created only for the Agentic RFP Evaluation classroom project.
